Education

2023 - 2024

Diploma in Computer System Design

National Institute of Business

Management

GPA : 3.9 / 4.0

2024 - 2025

Higher National Diploma in Software Engineering

National Institute of Business

Management

GPA : 3.9 / 4.0

(Ongoing)

Certifications

Oracle: OCI 2025 AI Foundations Associate.

Cisco: Networking Basics, Introduction to Modern AI, Computer Hardware Basics.

AWS: Introduction to Cloud 101.

Profile

Second-year Computing (Software Engineering) student at the National Institute of Business Management (NIBM), with a focus on web and mobile application development, backend systems, and IoT solutions. Skilled in simplifying complex programming concepts and fostering strong foundations in problem-solving and critical thinking.

Experience

May 2025 - Present

IoT Platform in Collaboration with SLT

Smart Shopping Cart | IoT Platform

This IoT platform powers smart retail with UHF RFID detection, real-time mobile billing, QR code checkout, security alerts, and product analytics. It uses Android Studio and React.JS for mobile and web interfaces, Spring Boot for the backend, Python for hardware logic, and Firebase for real-time cloud data handling.

May 2025 - Present

Personal Full-Stack Project

MealPlan Mobile & Web-based Application

Currently developing a mobile meal planner app that allows customers to subscribe to meal plans for a chosen duration. Users can register delivery addresses, manage personal details, and customize their plans through an intuitive interface. The app is built using Android Studio with Firebase for authentication, real-time database, and cloud storage.

July 2025

NIBM Mobile Application Development Project

Tuition Management Mobile Application

This application aims to streamline operations for tuition centers, enabling seamless communication and coordination between administrators, teachers, students, and parents. Built using Java in Android Studio and structured on the MVC architecture, the app integrates Firebase for real-time data management and authentication.

April 2025

NIBM Data Management Project

UrbanFood | Web-based Application

UrbanFood is a full-stack e-commerce platform designed to connect urban farmers and local producers with consumers. Built using a Microservices Architecture with Spring Boot, React.JS, and both Oracle RDBMS and MongoDB, the system enables streamlined product management, ordering, payments, and delivery.

March 2025

NIBM Enterprise Application Development Project

Food Ordering Web-based Application

This application facilitates user profile management, restaurant, menu browsing, and order placement, leveraging microservices architecture for scalability and modularity. The technology stack includes Spring Boot for backend services, MySQL for data management, React.JS for the frontend interface, and RESTful APIs for communication between components.

Technical Skills

Programming Languages: Java, C#, C Python and PL/SQL.

Database Management: MySQL, Oracle Database, MongoDB, Firebase (Cloud).

Frontend Development: HTML, CSS, JavaScript.

Frameworks & Design Patterns: MVC, Spring Boot, 3-tier Architecture.

Embedded Systems: ESP32, ESP8266, Raspberry Pi and Arduino UNO.

Tools

IntelliJ
Visual Studio
Visual Studio Code
NetBeans
Power BI
Arduino IDE
Thonny (MicroPython)

Soft Skills

Time Management
Communication
Team Work
Problem Solving

Extracurricular

NIBM Gavel Club -
Sergeant-at-Arms

Experience

November 2024

NIBM GUI Application Project

Order Processing System

In this project I created a system that allowed users to login to the system, add items that can purchased, manage customer orders and generate a sales report for decision-making purposes. The technologies I used were Visual Studio, C#, MS SQL, and crystal reports.

October 2024

NIBM 1st Year Final Project

U.N.C Trade Center Management System

For my System Design and Development (Final project), together with my amazing team developed and designed a computerized system for a hardware store. This involved my using knowledge in UML diagrams, ER diagrams and proper documentation methods. In addition to this, I learned soft skills such as communication when gathering client needs, and teamwork when it came to working with my team.

2021 - Present

Self-Employed Tutor

Ordinary Level Tutor

I continue to work as a self-employed tutor with experience in teaching ordinary-level (Edexcel syllabus) subjects, such as Mathematics, ICT, and Computer Science. I have created a friendly environment for O/L students in which I encourage them to develop their problem-solving and critical-thinking abilities. In my experience being a tutor, I have worked with students of varying skill levels, language barriers and disabilities. I have received a lot of positive feedback from both students and parents.

Working hours: 4 hours on weekends.
